A; Experimental source: strains 775 and 531A
A; Experimental source: strains 775 and 531A
A; Genetics:
A; Genetics:
A; Genetics: recA
C; Function:
A; Description: plays an essential role in homologous recombination, in induction of the C; Superfamily: recombination protein recA
C; Superfamily: recombination protein recA
C; Keywords: ATP; DNA binding; DNA recombination, DNA repair; nucleotide binding; P-loop F; 55-72/Region: nucleotide-binding motif B
F; 55-72/Region: nucleotide-binding motif B
F; 55-73/Region: ATP binding #status predicted
F; 71/Binding site: ATP (Lys) #status predicted

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               DNA Res. 8:11-22(2001).
-!- FUNCTION: Can catalyze the hydrolysis of ATP in the presence of single-stranded DNA, the ATP-dependent uptake of single-stranded DNA by duplex DNA, and the ATP-dependent hybridization of homologous single-stranded DNAs. It interacts with lexA causing its activation and leading to its autocatalytic cleavage (By

"Cloning and nucleotide sequence of the recA gene from Shigella sonnei
"Cloning and nucleotide sequence of the recA gene from Shigella sonnei
"Cloning and nucleotide sequence of the EMBL/GenBank/DDBJ databases.
"Submitted (OCT-1998) to the EMBL/GenBank/DDBJ databases.
-! FUNCTION: Can catalyze the hydrolysis of ATP in the presence of
single-stranded DNA, the ATP-dependent uptake of single-stranded
DNA by duplex DNA, and the ATP-dependent hybridization of
homologous single-stranded DNAs. It interacts with lexA causing
its activation and leading to its autocatalytic cleavage.
-! SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
-! SIMILARITY: Belongs to the recA family.
                                                                                                                                                                                                                                                                                                                                                           BIRVKVVKNKIAAPPKQABPQILYGEGINFYGELVDLGVKEKLIBKAGAMYSYKGEKIGQ

Nati. Acad. Sci. U.S.A. 101:11105-11110(2004).

-1- FUNCTION: Can catalyze the hydrolysis of ATP in the presence of single-stranded DNA, the ATP-dependent uptake of single-stranded DNA by duplex DNA, and the ATP-dependent hybridization of homologous single-stranded DNAs. It interacts with lexA causing its activation and leading to its autocatalytic cleavage (By

-1- FUNCTION: Can catalyze the hydrolysis of ATP in the presence of single-stranded DA, the ATP-dependent uptake of single-stranded DNA by duplex DNA, and the ATP-dependent hybridization of homologous single-stranded DNAs. It interacts with lexA causing its activation and leading to its autocatalytic cleavage.
-1- SUBGELULURA LOCATION: Cytoplasmic (By similarity).

Insights into the evolution of Yersinia pestis through whole-genome
T comparison with Yersinia pseudotuberculosis."

In single-stranded DNA, the ATP-dependent uptake of single-stranded
DNA by duplex DNA, and the ATP-dependent uptake of single-stranded
DNA by duplex DNA, and the ATP-dependent hybridization of
homologous single-stranded DNAs. It interacts with lexA causing
its activation and leading to its autocatalytic cleavage (By

Submitted (JAN.1993) to the EMBL/GenBank/DDBJ databases.

-!- FUNCTION: Can catalyze the hydrolysis of ATP in the presence of single-stranded DNA, the ATP-dependent uptake of single-stranded DNA by duplex DNA, and the ATP-dependent hybridization of homologous single-stranded DNAs. It interacts with loxA causing its activation and leading to its autocatalytic cleavage.
-!- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                  Bacteriol. 172:342-349(1990).

Bacteriol. 172:342-349(1990).

FUNCTION: Can catalyze the hydrolysis of ATP in the presence of single-stranded blank, the ATP-dependent uptake of single-stranded DNA by duplex DNA, and the ATP-dependent hybridization of homologous single-stranded DNAs. It interacts with lexA causing its activation and leading to its autocatalytic cleavage.

SUBCELDUAL LOCATION: Cytoplasmic (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         PROSITE; PS00321; RECA_1; 1.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 6, A Sequence 7, A Sequence 9, A Sequence 14,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 11427, Application US/11098686

Sequence 11427, Application US/11098686

GENERAL INFORMATION:
APPLICANT: Kapur, Vivek and Gebhart, Connie J.
TITLE OF INVENTION: NUCLEIC ACID AND POLYPEPTIDE SEQUENCES
TITLE OF INVENTION: FROM LAWSONIA INTRACELLULARIS AND METHODS OF USING
FILE REFERENCE: 09531-128001
CURRENT APPLICATION NUMBER: US/11/098,686
CURRENT FILING DATE: 2005-04-04
PRIOR PELING DATE: 2003-10-01
